The KMWE ProWorks Experience

Eindhoven, Netherlands

"Integrating ProWorks into our Eindhoven assembly facility was quite simple. ProWorks is both easy to use and flexible in operation. Within one year of deployment, more than 200 different modules are now assembled using the ProWorks software."

"Customer satisfaction has increased and management now has a better grip on our internal processes. The software also allows us to easily scale up production as the instructions are easy to follow for all assembly employees with picture, movies and drawings."

"We use Proworks to assemble modules in the Semiconductor, Medical, and Aerospace fields as well as on general industrial assemblies. In the future, Proworks will even be used for the production of single mechanical Parts."

"ProWorks is helping KMWE grow to become the supplier of choice in the hi-tech industry."
