The Multitest ProWorks Experience

Rosenheim, Germany

Multitest is a leading test equipment supplier for the Semiconductor Industry. This industry has a reputation for demanding high quality equipment and short lead times to react to constant market fluctuations.

"To improve our process quality, Multitest started implementing ProWorks in 2003 for our internal manufacturing operation. Very soon the benefits of ProWorks became obvious and we expanded ProWorks to include our world wide manufacturing facilities and supplier base. Today, ProWorks has become essential in helping us maintain control of our manufacturing processes in each of our facilities. It also enables us to ramp-up production capacity as fast as the market requires, without sacrificing product quality. ProWorks is vital in supporting our continuous improvement targets in terms of quality, costs and cycle time."

"We could not run this business without it!"

-Dipl. Ing. (FH) René Altmann
Head of Quality and Manufacturing
Engineering
